PRODUCT INTRODUCTION

HydriQ Cream is a prescription medicine having a combination of medicines that is used to treat melasma. It helps in quick skin renewal. It provides relief from redness, swelling and itching.

HydriQ Cream should be used in the dose and duration as advised by your doctor. Wash your hands before using this medicine. It is advised to check the label for directions before use. It is for external use only.

Do not use this medicine more than the recommended dose. Inform your doctor if you have known allergies from this medicine. The common side effects of this medicine include burning, irritation, itching and redness at the application site.

If these side effects or any other symptoms which you think are because of this medicine persist for a longer duration, please consult your doctor. Inform your doctor if you are pregnant or are suffering from any other disease. This medicine is not safe to use in breastfeeding mothers.

USES OF HYDRIQ CREAM

BENEFITS OF HYDRIQ CREAM

In Melasma

Melasma is a common skin problem that causes dark, discolored patches on your skin primarily on the face. It frequently occurs during pregnancy and menopause. HydriQ Cream helps to lighten these dark patches by reducing the production of melanin (natural skin pigment). It lightens skin color and gives a smoother looking skin. HydriQ Cream also reduces any swelling, redness and itchiness especially if you have a sensitive skin. This helps boost your self-esteem and confidence as your appearance changes. Keep using it for as long as it is prescribed to get the full benefits.

SIDE EFFECTS OF HYDRIQ CREAM

Most side effects do not require any medical attention and disappear as your body adjusts to the medicine. Consult your doctor if they persist or if you're worried about them

Common side effects of HydriQ Cream

- Erythema (skin redness)
- Skin peeling
- Burning sensation
- Dryness
- Itching

HOW TO USE HYDRIQ CREAM

This medicine is for external use only. Use it in the dose and duration as advised by your doctor. Check the label for directions before use. Clean and dry the affected area and apply the cream. Wash your hands after applying, unless hands are the affected area.

HOW HYDRIQ CREAM WORKS

HydriQ Cream is a combination of three medicines: Hydroquinone, Tretinoin and Fluocinolone acetonide which treat melasma (dark spots on skin). Hydroquinone is a skin lightening medicine. It reduces the amount of a skin pigment (melanin) that causes darkening of skin. Tretinoin is a form of vitamin A that helps the skin to renew itself more quickly. Fluocinolone acetonide is a steroid which blocks the production of certain chemical messengers (prostaglandins) that make the skin red, swollen and itchy.

SAFETY ADVICE

Alcohol

No interaction found/established

Pregnancy

CONSULT YOUR DOCTOR

HydriQ Cream may be unsafe to use during pregnancy. Although there are limited studies in humans, animal studies have shown harmful effects on the developing baby. Your doctor will weigh the benefits and any potential risks before prescribing it to you. Please consult your doctor.

Breast feeding

UNSAFE

HydriQ Cream is unsafe to use during breastfeeding. Data suggests that the drug may cause toxicity to the baby.

Driving
