STORAGE

Store below 30°C

PRODUCT INTRODUCTION

Sicream is an antibiotic used to treat bacterial skin infections. It is effective in treating infected cuts, wounds, and minor burns. This medicine stops the bacteria from growing, which helps to resolve your symptoms and cure the underlying infection.

Sicream is meant for external use only. It should be applied only to the affected area of the skin as per the dosage and schedule prescribed by your doctor. In order to get the most benefit, apply it regularly and preferably at a fixed time each day. Do not use larger amounts or apply it more often or for a longer duration than directed. This will only increase the risk of side effects.

Local side effects like minor burning, irritation, itching, and redness may be seen after the application of this medicine. These side effects are temporary and resolve quickly. Consult your doctor if these persist or if your condition does not improve.

Avoid any contact with your eyes, nose, or mouth. Rinse off any accidentally exposed area with water. Before using it, inform your doctor if you have any previous history of allergy to it or any other medicine. Pregnant or breastfeeding women should consult their doctor before using it.

USES OF SICREAM

- [Bacterial skin infections](#)

BENEFITS OF SICREAM

In Bacterial skin infections

Sicream is an antibiotic that works by stopping the growth of infection-causing bacteria on your skin. It prevents the synthesis of essential proteins necessary for the survival of bacteria. It is effective against skin infections such as boils, impetigo, and infected hair follicles. It may also be used to treat infections in small cuts or wounds on your skin. This treatment has few common side effects and should clear up infections within a few days, but you should keep using it for as long as it is prescribed.

SIDE EFFECTS OF SICREAM

Most side effects do not require any medical attention and disappear as your body adjusts to the medicine. Consult your doctor if they persist or if you're worried about them

Common side effects of Sisonext

- Application site reactions (burning, irritation, itching and redness)

HOW TO USE SICREAM

This medicine is for external use only. Use it in the dose and duration as advised by your doctor. Check the label for directions before use. Clean and dry the affected area and apply the cream. Wash your hands after applying, unless hands are the affected area.

HOW SICREAM WORKS

Sicream is an antibiotic. It stops bacterial growth by preventing synthesis of essential proteins required by bacteria to carry out vital functions. This treats your skin infection.
