EPITREAT XL Cream should be used in the dose and duration as advised by your doctor. Wash your hands before using this medicine. It is advised to check the label for directions before use. It is for external use only.

Do not use this medicine more than the recommended dose. Inform your doctor if you have known allergies from this medicine. The common side effects of this medicine include peeling of skin, stinging sensation, burning, and redness at the application site.

If these side effects or any other symptoms which you think are because of this medicine persist for a longer duration, please consult your doctor. Inform your doctor if you are pregnant or are suffering from any other disease. This medicine is not safe to use in breastfeeding mothers.

USES OF MELAPIK CREAM

- Melasma

BENEFITS OF MELAPIK CREAM

In Melasma

Melasma is a common skin problem that causes dark, discolored patches on your skin primarily on the face. It frequently occurs during pregnancy and menopause. EPITREAT XL Cream helps to lighten these dark patches by reducing the production of melanin (natural skin pigment). It moisturizes and gives a smoother-looking skin. This helps boost your self-esteem and confidence as your appearance changes. Keep using it for as long as it is prescribed to get the full benefits.

SIDE EFFECTS OF MELAPIK CREAM

Most side effects do not require any medical attention and disappear as your body adjusts to the medicine. Consult your doctor if they persist or if you're worried about them

Common side effects of Melapik

- Skin peeling
- Stinging sensation
- Erythema (skin redness)
- Burning sensation at the site of application

HOW TO USE MELAPIK CREAM

This medicine is for external use only. Use it in the dose and duration as advised by your doctor. Check the label for directions before use. Clean and dry the affected area and apply the cream. Wash your hands after applying, unless hands are the affected area.

HOW MELAPIK CREAM WORKS

EPITREAT XL Cream is a combination of three medicines : Hydroquinone, Tretinoin, Allantoin that treat melasma. Hydroquinone is a depigmenting or skin bleaching agent. It produces lightening of your skin by decreasing the number of melanocytes (those specialized cells that make melanin, the pigment in your skin that produces your skin tone) present or produced in your skin. Tretinoin is a form of vitamin A that helps the skin to renew itself more quickly. Allantoin is a skin protectant which works as a moisturizer and relieves minor skin irritations.
